Summary of Results

Software Applications Used by Utah Public Schools

Computing Devices Available to Utah Public School Students

Utah Schools Using Student Information Systems

- Schools that do not use student information systems
- Schools that use ASPIRE
- Schools that use a system other than ASPIRE

EXECUTIVE SUMMARY

I. Executive Summary

Understanding that technology can bring world-class learning opportunities to students, regardless of income, location, or demographics, the state of Utah committed to fund \$4 million through Senate Bill 222 (Appendix A) to develop a digital teaching and learning program proposal, a portion of which was dedicated to funding the vital Utah School Technology Inventory project outlined in this report.

With the lofty goal of obtaining a detailed inventory of every Utah public schools' assets and requirements prior to the upcoming 2016 legislative session, and under the direction of UETN, **Connected Nation successfully gathered data from 100% of Utah public schools, including charter schools, accounting for 989 schools serving nearly 627,000 students across the state.** Connected Nation used a myriad of data collection, assessment and communications techniques to gather the information and complete a robust data analysis. This collection process and subsequent findings are outlined in this report. Armed with in-depth data, as well as meaningful assessments from local points of contact, the state of Utah will be able to promote digital teaching and learning from an informed, data-driven perspective.

Beginning in October 2015, the project team first developed a list of individual points of contact for each school district and charter school in the state, followed by the development of an online data collection portal and pre-formatted spreadsheet to facilitate the collection of data. Once complete, the login-based portal was provided to local points of contact and an instructional webinar was hosted to train users on its functionality. At that point, the data collection process officially began. By early December, Connected Nation presented a preliminary report of findings to UETN, while three regional data collection managers were deployed on a multi-week, statewide tour to assist schools with their data submissions. These aggressive efforts resulted in a comprehensive collection of data, and on January 15, 2016, Connected Nation and UETN concluded the Utah School Technology Inventory.

The findings below highlight some key points and showcase specific technology needs among the state's K-12 educational institutions, helping Utah leaders understand digital learning in the state more fully.

Key Results and Findings:

- 100% of Utah's public and charter schools participated in the project;
- More than 380,600 computing devices are available to Utah's nearly 627,000 students, which equates to approximately 0.61 devices per student;
- 246,400 (39%) students still need computers;
- 11% of schools deploy devices on a 1:1 basis to their students;
- Only 5% of schools deploy devices on a 1:1 basis where students are allowed to take their devices home;
- Wi-Fi infrastructure is lacking; 79% of schools have fewer than one wireless access point (AP) per classroom or instructional space;
- To achieve 1 AP per classroom or instructional space, schools would require the installation of an average of 16.8 cable drops and the acquisition of one 24-port switch (15.5 ports required);
- 47% of district and charter school respondents feel that adequate professional development and training resources are not available to help teachers effectively integrate mobile devices into their classrooms; and

- Utah's wired and wireless infrastructure is aging; 64% and 61% of schools report that their wired networking hardware and wireless hardware, respectively, is at least three years old.
